

Veterans Affairs (VA) Chart Complete

Automatically identify and monitor chart deficiencies with VA Chart Complete (VACC). Integrated seamlessly with VistA and the Quantim® solution suite, VACC makes time-consuming, manual compilation of deficiency data a thing of the past. VACC provides point-and-click reporting to track chart deficiencies, such as missing discharge summaries, history and physicals, and other critical information. VACC also helps prepare for Joint Commission audits.

TRACK DEFICIENCIES AUTOMATICALLY

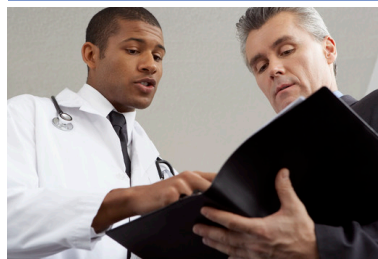

Enhance your reporting capabilities to help meet Joint Commission requirements with VACC. This robust program, which is easily enabled through your existing web-based Quantim coding and compliance program, enables staff to track deficient information within the medical record with the click of a button.

Plus, because VACC is integrated with VistA, you'll no longer need to pull deficiency information directly from VistA and manually compile reports for performance improvement activities or Joint Commission reviews. VACC can instantly provide graphs of chart aging, delinquency calculations, and time-stamp deficiencies. And with its ability to identify clinical documentation deficiencies by provider, you can use VACC data in the credentialing and clinical documentation improvement processes.

FEATURES AND BENEFITS

- **Increases efficiency and decreases time-consuming activities.** Run reports that identify deficient chart data with VACC's VistA integration.
- **Accelerates revenue processes.** Quickly identifying deficiencies leads to faster record-completion rates and faster claim submission.
- **Improves clinical documentation improvement efforts.** Track providers who are consistently missing critical information to identify educational opportunities.
- **Enhances reporting capabilities.** Report templates include extensive selection criteria, and you can pull detailed historical record-completion information for single or multiple providers and departments.
- **Prepares for Joint Commission audits.** Easily run periodic or scheduled reports that check your record-completion rate to ensure you're prepared for audits.
